MEDITERRANEAN ENVIRONMENTAL CHANGE MANAGEMENT
MASTER STUDY & ECOSYSTEM BUILDING

The Mediterranean basin is famous for its natural diversity, but also an area with pressing environmental problems.

Apart from general issues such as waste management, water and air pollution and their effects on the population's health, these countries face severe challenges through desertification, deforestation and threats to biodiversity caused directly by environmental change and with severe implications for their economies, especially regarding agriculture and the tourism sector.

change management will be crucial to seize socioeconomic opportunities linked to environmental change and minimize its risk.
