

## **MEDITERRANEAN ENVIRONMENTAL CHANGE MANAGEMENT MASTER STUDY & ECOSYSTEM BUILDING**

---

---

### **\*Editorial**

**This project stems from the will of a whole group of Western Mediterranean universities to weave an alliance aiming at training and preparing actively and collaboratively our students for the greatest environmental and social challenges facing the entire planet and especially our region: the environmental change.**

A key concept that must be retained in our mind and that includes changes in atmospheric composition, as well as in land use and land cover or the arrival of invasive species among many others - all under the persistent impulse of climate change. The consequences that derive from this new environmental reality are multiple with a direct impact on agriculture, tourism and other economic activities, perhaps impacting on social and political stability and posing at risk the rich natural and cultural heritage that characterizes the Mediterranean basin.

Faced with this situation, it is necessary to react by training a new generation of technicians, engineers and managers that are capable of facilitating both the adaptation to this new reality and preventing future aggravation from the minimization of the impacts derived from human activity.

In this context, the MEHMED project implicating the implementation of a master's degree on environmental change in eight partner universities of the Maghreb represents both a need and a great opportunity for the future. Either for the students who participate or the professionals and technicians who want to upgrade in the field of environmental change management in the Mediterranean. We encourage you to get involved, to give support and to participate. Take advantage of this project!

We would like to acknowledge again the European Union for the financial support received through the Capacity Building program of the Education, Audiovisual and Culture Executive Agency (EACEA).

*"Moreover, we encourage you to actively participate and support this key project facing the future of our countries and the entire Mediterranean region. We cannot mortgage the future of young people and future generations, but we must work together for a future with hope".*

## \*Latest news about Mehmed

### Project presentation in Girona and Mena countries

On February 28 and March 1 2019, the University of Girona hosted the Kick-off of the MEHMED project.
